Abstract of **DE19756816**

The corner fastener has a plate mounted in a corner area of the picture frame (3). The plate (1) has strips (2) of adhesive material which exerts a drawing force in the direction of the gluing plane on the picture frame. The rear face of the frame can be similarly glued so that the plate (1) can be attached, without damage, to the strips. The plate can have reduced thickness in its edge area. The plate can be rectangular with two edge areas (8) being thinner. The plate can have an opening (9) to which a strip or cord can be attached for hanging the picture.
